

WISC. More information

Intelligence is estimated with the Wechsler Intelligence Scale for Children in the third (WISC-III Dutch version, Wechsler, 2003) and fifth edition (WISC-V Dutch version, Wechsler, 2018). Up until 2018 the WISC-III was the latest Dutch WISC version. Therefore, we started data collection using the third edition assessing six subtests of the WISC-III: arithmetic, block design, coding, digit span, similarities and vocabulary. The WISC-V was administered from the moment it was made available in 2018. We assessed seven subtests of the WISC-V: block design, coding, digit span, figure weights, matrix reasoning, similarities and vocabulary.
